Vapour phase LPG GPL filter DOUBLE FILTRATION tissue paper and polyester, popular in BRC and others FL02

Price	8.70 Euro
Availability	Always on stock
Shipping time	24 hours
Number	PT-FL02

Product description

Filter used in BRC installations and other

FILTER PARAMETERS

- FLASH PHASE: double filtration with paper and polyester insert
- FILTER AREA: 0.036m² paper + 0,031m² polyester
- ASSEMBLY THREAD: M20 x 2mm

APPROVAL
67R-010 703
110R-000025
CL2

High quality filter paper effectively stops almost all solid contaminants with diameters of about 2 µm, protecting gas injectors. Regular filter replacement every 10-15 thousands km ensures adequate lifetime of the entire LPG installation with the vehicle. The vapour phase filter is of particular importance to the operation of gas injectors and has a direct effect on preventing the firing of valves in the engine head. Clean gas injectors can deliver identical portions of gas to individual cylinders and this has a direct impact on the proper engine operation parameters and the process of its consumption.

A filter from the Polish producer CZAJA

This product has additional options:

Type of the filter: vapour phase filter

Type of LPG filter cartridge: tissue papper 843 VH 134 + polyester 478/170
